AMENDMENTS TO THE CLAIMS

- 1. (Previously Presented) A fender formed from a rubber composition, wherein said rubber composition has a rate of change of compressibility R_{-30}/R_{23} of not more than 1.3 (where R_{-30} denotes a maximum reaction force at -30°C as determined by compressive test and R_{23} denotes a maximum reaction force at 23°C as determined by compressive test) and/or a rate of change of compressibility R_{60}/R_{23} of more than 0.90 (where R_{23} denotes the maximum reaction force at 23°C and R_{60} denotes a maximum reaction force at 60°C).
- 2. (Previously Presented) The fender according to claim 1, wherein said rubber composition has the rate of change of compressibility R_{-30}/R_{23} of not more than 1.3 (where R_{-30} denotes the maximum reaction force at -30°C as determined by compressive test and R_{23} denotes the maximum reaction force at 23°C as determined by compressive test), thus imparting the fender with a sufficient compressive energy absorptivity for functioning as a shock absorber in a low-temperature range.

- 3. (Previously Presented) The fender according to claim 2, wherein said rubber composition has:
- (i) a rate of change of rigidity modulus $G_{-30}/G_{23}<1.38$ and $\tan\delta<0.07$ as determined by dynamic shearing test (where G_{-30} and G_{23} denote dynamic moduli of rigidity at -30°C and at 23°C, respectively, as measured under the conditions of a frequency at 0.3Hz and a displacement of 2.5mm); and
- (ii) a rate of change of elasticity modulus $E*_{-30}/E*_{23}<2.3$ and $\tan\delta<0.10$ as determined by dynamic tensile test (where $E*_{-30}$ and $E*_{23}$ denote dynamic moduli of elasticity in tension at -30°C and at 23°C, respectively, as measured under the conditions of a frequency at 10Hz and a displacement of $50\mu m$).
- 4. (Previously Presented) The fender according to claim 1, wherein said rubber composition has the rate of change of compressibility R_{60}/R_{23} of more than 0.90 (where R_{23} denotes the maximum reaction force at 23°C and R_{60} denotes the maximum reaction force at 60°C), thus imparting the fender with a sufficient compressive energy absorptivity for functioning as a shock absorber in a high-temperature range.

Appl. No. 09/834,606

- 5. (Previously Presented) The fender according to claim 4, wherein said rubber composition has:
- (i) a rate of change of rigidity modulus $G_{60}/G_{23}>0.9$ and $\tan\delta<0.11$ as determined by dynamic shearing test (where G_{60} and G_{23} denote dynamic moduli of rigidity at 60°C and at 23°C, respectively, as measured under the conditions of a frequency at 0.3Hz and a displacement of 2.5mm); and
- (ii) a rate of change of elasticity modulus $E^*_{60}/E^*_{23}>0.7$ and $\tan\delta<0.14$ as determined by dynamic tensile test (where E^*_{60} and E^*_{23} denote dynamic moduli of elasticity in tension at 60°C and at 23°C, respectively, as measured under the conditions of a frequency at 10Hz and a displacement of 50 μ m).
- 6. (Currently Amended) The fender according to claim 1, wherein said rubber composition contains 20 to 80 parts by weight of carbon black and 0 to 20 parts by weight of softener based on 100 parts by weight of a base rubber material.
- 7. (Previously Presented) A method for producing a fender from a rubber composition as a base material, wherein the rubber composition is prepared as an elastic base material and has a rate of change of compressibility R_{-30}/R_{23} of not more than 1.3

(where R_{-30} denotes a maximum reaction force at -30°C as determined by compressive test and R_{23} denotes a maximum reaction force at 23°C as determined by compressive test) and a rate of change of compressibility R_{60}/R_{23} of more than 0.90 (where R_{23} denotes the maximum reaction force at 23°C and R_{60} denotes a maximum reaction force at 60°C).

- 8. (New) The fender according to claim 6, wherein the base rubber material is selected from the group consisting of natural rubber, a synthetic rubber and mixture thereof.
- 9. (New) The fender according to claim 8, wherein the synthetic rubber is butadiene rubber or styrene-butadiene rubber.
